

Profitable Beef Production Maximize Your Beef Production Life Cycle with Loomix[®]

For years, University and independent research has shown that proper supplementation is essential to gain optimum performance with beef cattle. This prospectus is designed to show the benefits and profitability of using Loomix[®] in the beef cow operation.

Loomix[®] liquid supplement products are designed to meet the unique needs of western cattlemen with specific programs that work in every phase of cattle production. Loomix[®] products can also be custom formulated to meet the specific needs of each individual cattle operation.

Loomix[®] liquid supplements are backed by more than thirty years of research. Carefully formulated and based on natural ingredients, Loomix[®] products can provide more natural protein than other liquid supplements.

The nature of Loomix[®] supplements make them an ideal carrier for approved additives to help control such conditions as Grass Tetany, Bloat, Coccidiosis and others. Many approved additives can be mixed into the Loomix[®] products right at the trough.

Through research trials, Loomix[®] supplements have proven to improve fiber digestion by as much as 34%. This advantage allows the cattlemen to utilize many different types of roughages in a more effective manner. Wheat straw, corn stalks, poor pasture, and hays of all types can be fed with much more profitable results than without a supplement.

Loomix[®] supplements' high density allows animals to get optimum supplementation without taking up valuable rumen capacity. This allows cattle to consume more economically priced roughage.
